

The Odometer

A Weekly Team Driven Update

Kick off: January 5th

Hello and welcome to Team Driven! We are ecstatic about this year's season! Our season finally started on Saturday, and we got to work fast! We have been brainstorming ideas on how to feat this year's game, Ultimate Ascent. This year's game starts with a fifteen second autonomous period during which point values are doubled. Teams then compete for two minutes by throwing discs into goals to receive certain points. There are three goals; the higher the goal, the more points the teams receive. At the end of the game, robots try to climb up a ten foot pyramid in order to get more points. Now we have to go think of more ways to feat Ultimate Ascent and to start building our robot! We only have six weeks to build this robot before we go to competitions. Good luck to all FIRST Teams!!

Also to let you know, Team Driven will be attending the Kansas City Regional and the Razorback Regional.
